DETAILED ACTION

This is in response to communication filed on 7/17/07 in which claims 1-13 are pending. The applicant's amendments have been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: the prior arts of record fail to anticipate or render obvious the following recited features: A determining unit for determining whether the input signal is to be resent or not, based on the information of the guard interval period of the input signal; and a control unit for restricting the process of resending an input signal determined by the determining unit as a signal other than a signal to be resent as recited in claims 1 and 12. A determining unit for determining the degree of correlation between a part of the input signal and the guard interval period of the signal delayed by the delay unit; and a control unit for restricting the resending operation of the amplifier unit in the case where the degree of correlation of the input signal determined by the determining unit is lower than a predetermined degree and the input signal is other than a signal to be resent as recited in claims 4 and 13.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shin U.S. patent No 5,345,271 teaches an apparatus for separating vertical synchronizing signal.
